

Let Vista Resize Pictures for Your Email

Find a picture that you want to email (for instance in your 'My Pictures' folder) and **right click** on the picture that you want to send. Choose "Send to" and select "Mail Recipient"

A window will pop up with the option

Click on Smaller and then click Attach

You should see an email with the picture as an attachment. Now, with smaller files fewer than 50k you won't see much change, but with large files you will.

For Instance: a 1.16MB picture was reduced to 80k!
This certainly makes pictures easier to email.
